

Full stack Web developer

juladev9@outlook.com | St. Petersburg, Russia | +7 981 879 9968 | [Github.com/Julialcedev](https://github.com/Julialcedev)

Summary

Results-driven full stack web developer with 5 years building backend services, APIs, and cloud-native web applications using Node.js, Python, React, and TypeScript. Strong background in API design, microservices, and AWS-based deployments with hands-on experience in PostgreSQL and NoSQL stores. Comfortable working in Agile teams, contributing to architecture, and delivering secure, maintainable systems relevant to mission-focused environments.

Skills

Languages: Python, JavaScript/TypeScript, PHP, Java
Backend & APIs: Node.js, Flask, Django, FastAPI, RESTful APIs, Spring Boot, Laravel, CI
Frontend: React, React Native, Next.js, Redux, HTML5, CSS3
Cloud & DevOps: AWS (EC2, Lambda, S3), Docker, CI/CD, Git, GitHub Actions, Jenkins
Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, SQL
Testing & Tooling: Jest, Playwright, JUnit, Postman
Architecture & Practices: System design, API versioning, authentication, Agile

Professional Experience

Full Stack Web Developer- *October Labs Pte Ltd (Aug 2024 – Feb 2026)*

- Led development of **RESTful APIs** and **microservices** using **Node.js** and **Python (Flask/Django)** to support a multi-tenant SaaS platform, improving maintainability and deployment predictability.
- Designed and implemented **authentication** and session flows integrated with **PostgreSQL** and **Redis** to stabilize user sessions and reduce intermittent failures.
- Built and maintained serverless ingestion pipelines on **AWS Lambda** and **S3**, enabling batch uploads and automated processing of customer data.
- Architected database schemas and optimized queries in **PostgreSQL** and **MongoDB**, improving query consistency and overall API responsiveness.
- Owned end-to-end frontend implementation of core SaaS features using **React**, **TypeScript**, and **CSS Modules**, delivering responsive interfaces that adapt across desktop, tablet, and mobile breakpoints.
- Implemented CI/CD pipelines with **GitHub Actions** and containerized builds using **Docker**, reducing manual deployment steps and improving release cadence.
- Created comprehensive API contracts and OpenAPI documentation for frontend teams working with **React** and **TypeScript**, accelerating integration efforts.
- Developed background workers and scheduled jobs for data processing using **Node.js** and container orchestration patterns, improving throughput of ETL workflows.
- Collaborated with product and UX teams to convert SPA requirements into scalable API patterns consumed by **React** frontends and **React Native** mobile prototypes.
- Drove security improvements by introducing input validation, parameterized queries, and secrets management tied to **AWS** credentials and environment configuration.
- Led code reviews focused on performance and reliability, introducing standardized logging and observability with structured logs and traces.
- Implemented feature toggles and rollout strategies to safely deploy complex backend changes while coordinating with cross-functional teams.
- Integrated third-party APIs and payment/webhook processors, handling retries and idempotency across **Node.js** services and database transactions.
- Mentored intern engineers on backend design, testing practices, and system debugging techniques across **Python**, **Node.js**, and **AWS** toolsets.
- Participated in architecture discussions to migrate monolithic services toward a modular microservices layout with clearer service boundaries.
- Led mobile QA and release readiness for hybrid builds, documenting reproduction steps, verifying fixes, and coordinating app store checklist items for **Capacitor**-based builds and web packaging.
- Designed and implemented client-side data fetching patterns with **React Query**, improving perceived load and simplifying offline handling for slow mobile networks.
- Introduced mobile-focused automated tests and device matrix checks using **Playwright**, reducing mobile regressions and surfacing layout issues across iOS and Android webviews.
- Troubleshoot cross-browser rendering and layout shifts, applying fixes for accessibility and keyboard navigation and documenting regression test cases.

Web Developer - October Labs Pte Ltd (Aug 2022 – Jul 2024)

- Developed full-stack features and reusable components for customer-facing applications using **React**, **TypeScript**, and **Node.js** backed by **PostgreSQL**.
- Implemented REST APIs in **Python (Flask)** and **Node.js**, focusing on clear contracts and error handling for upstream consumers.
- Built integration points with cloud storage and processing on **AWS S3** and collaborated on initial serverless proofs-of-concept using **AWS Lambda**.
- Tuned database indexes and query plans in **PostgreSQL** to improve response times for reporting endpoints and reduce load on primary instances.
- Automated deployment workflows using **Docker** and CI pipelines, reducing manual release steps and improving rollback capability.
- Partnered with QA to introduce end-to-end and unit testing using **Jest** and Playwright for critical customer flows in the **React** frontend.
- Implemented caching strategies with **Redis** to alleviate read load and improve perceived page performance for high-traffic endpoints.
- Coordinated cross-team integration for third-party services, handling authentication flows and webhook reliability in **Node.js** services.
- Contributed to system design sessions to scope migrations from monolithic code to modular services and clarify ownership boundaries.
- Provided on-call support and performed incident triage, diagnosing root causes across application, database, and cloud layers.
- Produced technical documentation and runbooks for deploys, rollbacks, and operational procedures to improve team knowledge transfer.

Education

Bachelor of Computer Science, The University of Hong Kong (Aug 2018 – Jul 2022)
